

## Angular Fundamentals Lab3

Create a responsive SPA as shown

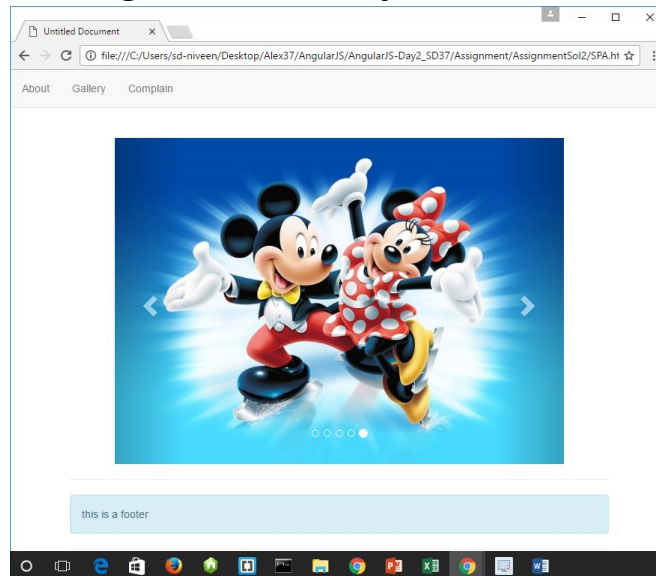

1)the below page is displayed when user navigates to about

In this page user can

- add new person
- display all added persons in a table
- allow the user to update person info and delete any one of them
- ensure that person name is displayed into uppercase

**2) the below page displays a slider using bootstrap carousel when user navigates to Gallery**

3) let the user add his complain in a form when navigates to Complain, when the user click send let a modal opens displaying a summary of his complain, where

- the user is allowed to edit his info so returns him back to the complain form
- user is also allowed to confirm his complain after which a notification page is displayed to him
